Profiles

GitHub
[Gnaneshwarsreepathi](https://github.com/Gnaneshwarsreepathi)

Education

National College of Ireland
Master of Science
Data Analytics
Dublin, Ireland • 2025 - 2026
Relevant areas: data analytics, research methods, machine learning and statistics.

Nishitha Degree and PG College
MBA
Information Technology
Nizamabad, India • 2020 - 2022

Sri Sai Raghavendra Degree and PG College
B.Sc.
Computer Science
Nizamabad, India • 2017 - 2020

Certifications

Microsoft Certified: Power BI Data Analyst Associate (PL-300)
Microsoft

Microsoft Certified: Azure Data Fundamentals (DP-900)
Microsoft

Microsoft Certified: Power Platform Developer Associate (PL-400)
Microsoft

MLOps/AI and DevOps engineer with 4+ years of experience across banking technology, machine learning operations, production support and data platforms. Hands-on with Python automation, FastAPI model services, Docker, CI/CD, MLflow practices, Linux, cloud deployments, monitoring and scheduler-driven workflows. Built repeatable ML workflows for data checks, model validation, artifact movement, API serving and release support. Earlier ETL, Control-M and mainframe support experience helps in handling large scheduled workloads, operational risk, RCA and production reliability in banking environments.

Technical Skills

Python / Engineering

Advanced
Python, Shell scripting, SQL, REST APIs, FastAPI, pytest basics, clean code, CLI automation

MLOps / DevEx

Advanced
MLflow, model packaging, experiment tracking, model registry, Conda, uv concepts, hatchling/pyproject.toml concepts

Containers / Cloud

Advanced
Docker, Kubernetes, container images, secrets/configs, readiness/liveness probes, AWS, Azure

CI/CD / Automation

Advanced
Jenkins, GitHub Actions, Azure DevOps, build/test/deploy pipelines, approval gates, rollback steps

Monitoring / Reliability

Advanced
logs, health checks, metrics, latency/error tracking, profiling support, ServiceNow, RCA

Workflow / Data Ops

Advanced
Airflow/Prefect concepts, Control-M, ESP, Informatica PowerCenter, ETL validation, Power BI, DAX

Research DevOps Familiarity

Working Knowledge
Linux internals basics, package management, native dependency handling, CUDA-aware environment concepts, Nix/Pixi concepts

Professional Experience

- Infosys Limited - Client: Westpac Banking CorporationHyderabad, India
MLOps / AI Platform EngineerJun 2023 - Aug 2025
- Built Python automation for data preparation, model validation, scoring checks and deployment readiness so analysts and engineers could run repeatable ML workflows with fewer manual steps.
 - Developed FastAPI-based model serving APIs with structured request validation, health endpoints, error handling and consistent JSON response formats for downstream applications.
 - Containerized ML and API workloads using Docker; pinned runtime dependencies and prepared reproducible Python environments using virtual environments and Conda-style dependency management.
 - Implemented CI/CD pipelines in Jenkins, GitHub Actions and Azure DevOps for code checkout, dependency installation, tests, image build, artifact publishing and controlled deployments.
 - Worked with Kubernetes and container deployment practices including environment variables, secrets, config maps, resource limits, rolling updates and readiness/liveness checks.

Microsoft Certified: Azure
Database Administrator
Associate (DP-300)
Microsoft

Infosys Certified
Mainframe JCL
Programmer (Internal)
Infosys

- Used MLflow practices for experiment tracking, model artifacts, metric comparison and model version movement between development and controlled release stages.
- Added operational monitoring around deployed services and batch workflows, tracking job failures, API errors, latency, logs and basic resource signals during production investigations.
- Automated recurring operational and analytics workflows using scheduler-driven patterns; mapped Control-M production discipline to Airflow/Prefect-style DAG thinking for ML pipelines.
- Supported cloud-based workloads across Azure and AWS, including storage, database connectivity, artifact movement and environment-specific configuration for ML and analytics use cases.
- Created documentation, release checklists and handover notes for model deployment, rollback, monitoring and support so teams could operate the platform without dependency on one engineer.
- Worked with stakeholders from testing, operations, analytics and development teams; made time-sensitive decisions during incidents, release validations and production fixes.

Infosys Limited - Client: Westpac Banking Corporation
Software Quality Engineer / Data Operations Engineer

Hyderabad, India
Jun 2021 - May 2023

- Supported banking applications across SIT, UAT and production by monitoring Control-M/ESP jobs, validating SQL outputs and coordinating issue resolution with development teams.
- Worked on Informatica PowerCenter and Azure Data Factory flows for data movement, reconciliation and quality checks used by banking operations and reporting teams.
- Performed RCA for failed jobs, data mismatches and release defects; handled incidents, problem tickets and change requests through ServiceNow.
- Built Power BI reports for defect trends, job health and operational metrics using DAX, Power Query, row-level security and scheduled refresh through gateways.
- Worked with z/OS, JCL and COBOL support areas enough to understand batch flow, job dependencies and escalation paths for critical banking workloads.

Projects

Research MLOps and DevEx Platform

2023 - 2025

Technology: Python, FastAPI, Docker, Kubernetes, MLflow, Conda, GitHub Actions, Jenkins, Azure/AWS

- Built an internal-style MLOps workflow covering data checks, training scripts, model artifacts, API serving, deployment checks and monitoring handover.
- Standardized repository structure, dependency files, environment setup notes and packaging approach so ML code could move from local development to controlled deployments.
- Created Docker-based runtime templates for Python ML services and documented dependency pinning practices to reduce environment drift between developers and release environments.
- Added CI/CD stages for test execution, image build, artifact storage, environment variable validation and release approval before deployment.
- Tracked model metrics and artifacts using MLflow and prepared clear promotion rules for moving models from experiment to release-ready status.

High Availability Model Serving and Monitoring

2023 - 2025

Technology: FastAPI, Docker, Kubernetes, Python, Prometheus/Grafana concepts, Azure/AWS, GitHub Actions

- Implemented model-serving API structure with health checks, exception handling, request logging and response contracts suitable for downstream application integration.
- Designed deployment flow with container image build, version tagging, secrets/config separation, readiness/liveness probes and rollback steps.

- Prepared monitoring views for API status, error count, response time and workload health to support performance investigations and production support.
- Worked on release runbooks covering deployment validation, smoke testing, failure triage and stakeholder communication during incidents.

Banking Data Operations and ETL Automation

2021 - 2023

Technology: Control-M, ESP, SQL, Informatica PowerCenter, Azure Data Factory, Power BI, ServiceNow

- Supported banking batch workflows and ETL jobs by validating upstream/downstream dependencies, rerunning failed jobs and reconciling SQL outputs.
- Created operational dashboards and reports for defects, job status and environment-level visibility, reducing manual follow-up during release and support cycles.
- Documented job flow, escalation paths and RCA notes to improve handover and reduce repeat incidents.
